

OPTIMUS FEATURING DATA INTEGRATOR

Optimus
BY TELROCK SYSTEMS

WHO ARE YOU?

You are a **Systems Integration Leader.**

You understand the value of expediting and removing the complexities and costs historically associated with file-based system-to-system integration.

You are a **Data Analysis Leader.**

You want to improve your organization's performance by using your data to help optimize results. You understand the importance of being able to upload and update data as well as being able to export data to other systems (internal and external) expeditiously, when, and as often as you need to.

You are a **Risk Strategy Leader.**

You know that your ability to incorporate data quickly into your business strategies (and associated workflows/rules) will allow you to service your customers better while improving results.

WHO ARE WE?

We are Telrock Systems, providers of **Optimus** - the newest, most innovative cloud-native collections and recovery solution that solves one of the biggest challenges facing debt management leaders: making optimal use of their firm's proprietary and third-party data to drive better collections results. Today's organizations need both real-time API integration, as well as supplemental file-based integration capabilities. Telrock Systems' solution supports both!

Optimus' no-code integration tool, **Data Integrator**, enables business users to configure and map inbound files to load and update data in Optimus, while also extracting data from Optimus to send to other systems - without reliance on your IT (Information Technology) organization. Optimus' database schema can maintain 15,000+ pre-defined attributes, which together with 'no-code' schema extensibility, enables organizations to incorporate unlimited amounts of their data into workflows, rules, data extracts, and analytics. Realizing that new data attributes need to be incorporated periodically, Optimus' Data Integrator provides an efficient and business-friendly means to add new data to Optimus and share data with other applications and/or third parties.

That's Optimus by Telrock Systems – Smarter Technology, Better Results.

Data Integrator was designed to provide organizations with the flexibility of ingesting, mapping, and testing multiple file formats, coupled with its ability to handle an inbound integration file that has multiple record types. Through all its flexible configuration, debt management leaders can map inbound data to Optimus including account, debtor, address, phone, email, collateral, financial transactions, history, and more. Through its transformation feature, data can be normalized or transformed, reducing the need for upstream solutions to alter their integration streams. Clients can leverage the Data Integrator subsystem to be used during conversion activities, loading new accounts, and updating existing accounts from clients, hosts, or data vendors.

From an outbound perspective, Data Integrator's integration flexibility can be leveraged to extract and format data to send to other solutions within your enterprise domain, such as servicing systems and enterprise data warehouses, or to external entities (e.g., third-party service providers and collection agencies). All of which could be initiated by leveraging workflow management and account decisioning features throughout the solution.

KEY VALUES:

- Leverage no-code integration which provides flexibility to replicate or add new data from anywhere.
- Utilize new data that can be easily and quickly added, thereby allowing new business strategies to be deployed efficiently.
- Provide more timely data to third-parties such as collection agencies that are working accounts on your behalf, better positioning those agencies to drive more dollars collected in a quicker manner.
- Reduce the reliance on your IT organization and/or solution provider as data access changes can be driven and deployed by the business.

About Telrock Systems

Telrock Systems is a global technology provider of modern SaaS, cloud-native consumer debt collection and universal business rules management and system integration solutions. Our flagship collections solution, *Optimus*, is an enterprise-wide collections and recovery software platform built new from the ground up. Our flagship business rules management and systems integration solution, *SmartConnect*, delivers rapid, no-code design, deployment and management of business rules and system integration capabilities for application in any enterprise. Both solutions leverage modern technology, powerful cloud computing, PCI DSS and SOC2 compliance and are built on more intelligent designs resulting in the broadest and richest Software-as-a-Service (SaaS) offerings in the market. We provide our solutions in North America and Latin America (LATAM) from our Atlanta office, and in Europe, the Middle East, Africa (EMEA), and Asia Pacific (ASPAC) from our London, UK office. Contact us at info@telrock.com or visit www.telrock.com for more information.
